

Fitting Treats into the StarMark Interactive Toys

Filling the Everlasting Toys

The inside of the Everlasting Toys are hollow to allow you to fill them with your dog's favorite food or treats, like Every Flavor Treats. Dogs can smell the food through the opening and hear it rattling on the inside, enticing them to play. They quickly learn that food falls out of the opening as they roll the Everlasting Toys around. The openings at either end of the Everlasting Toys allow you to easily insert most any food, and also allows food to fall out with movement. The Every Flavor Treats were specifically designed to fit the inside of the Everlasting Toys, and they can be snapped in half so they come out of the toys more easily. The Everlasting Toys can also be filled with anything else your dog enjoys eating: small biscuits, bite sized treats, or even your dog's regular kibble.

Inserting Everlasting Treats into Everlasting Toys

The Everlasting Treats were specifically designed to cap the ends of the Everlasting Toys including the Everlasting Treat Ball, Everlasting Beanie Ball, and Everlasting Fire Plug. (*The Everlasting Treats do not fit the Everlasting Fun Ball.*) Fill the Everlasting Toy with food or treats and then cap off one end to still allow the food to come out. For more challenging play, use two Everlasting Treats to cap off both ends--your dog will have to chew through at least one Everlasting Treat before getting to the goodies packed inside. Follow the easy steps below to insert the Everlasting Treats.

1. Push one end of the Everlasting Treat into the top rim of the Everlasting Toy

2. Push downward on the edges of the Everlasting Toy until all the edges fit inside the rim. (You can pull an edge of the rim out to help push in the Everlasting Treat.)

3. The Everlasting Treat is fully inserted when the top rim of the Everlasting Toy covers all the edges.

4. Give the Everlasting Toy to your dog and let the Everlasting fun begin!

Tip: Using the handle of a spoon to help pull the edges of the Everlasting Toy can help with insertion. Or you can also slightly dampen the rim with water to help the Everlasting Treat slide in more easily. Allow water to dry before giving the toy to your dog as the water will also enable the treat to slide out more easily.

Increasing the Challenge

Is your dog an expert at removing the Everlasting Treats? Increase his challenge and prolong playtime by filling the Everlasting Toy with food or treats, and then inserting the Everlasting Treat upside down. You can also insert the Everlasting Treat into the center cavity of the Everlasting Toy for the ultimate chewing challenge!
